

bio-filterSafe ...clean ...natural air from any scuba regulator

Apollo has been building inline air improvement systems since 1974. We are proud to announce our clean air system for use with all regulators. The bio-micro is designed to provide every diver with a cleaner air supply.

Scuba divers anywhere can enjoy the benefits of the bio-micro by simply installing the system on their existing personal or regulator. The unit is small, easy to install, and requires little maintenance.

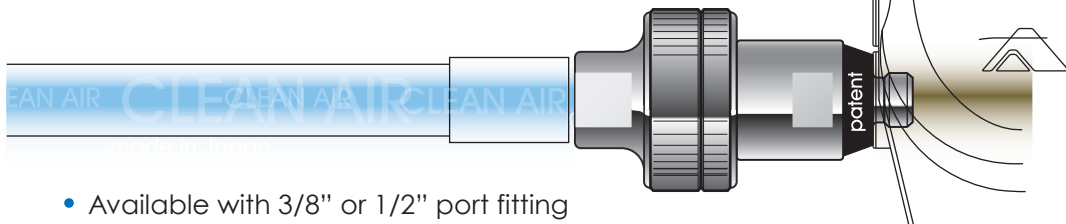

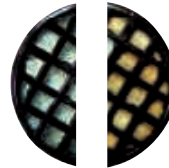

For scuba diving it is granted that the supply of ample air comes first but no less crucial is air quality. Dive tanks can house small particles of dust, rust, and oil residue that can be harmful if inhaled. The bio-micro utilizes a medically approved 2 in 1 electrostatic and activated charcoal filtration system to remove orders and contaminants from your air supply.

NEW bio-micro clean air system improve air quality

Have you ever
looked inside
your tank?

Before use After 2 dive

- Available with 3/8" or 1/2" port fitting
- Charcoal filter life: approximately 50 dives filter becomes discolored.
- Spares are available for purchase as needed
- System comes complete with two charcoal filters, and installation tools
- \$85.00 msrp

for immediate release
